

SPRINT DELIVERY PLAN

Identify the problem statement and best solutions for the customer needs.

1

Preparing abstract and defining the problem statement.

2

Purchase the required materials for the designed project and start the process.

3

Installation of required software and proceed with the code and debug or compile the process.

4

Make a executable prototype

5

Now check the prototype whether it is working in good condition or not.

6

Finally, the project has been completed successfully.
